## Decentralized Diversified Token Contracts **SEND. SWAP. DIVERSIFY**

### OVERVIEW

Crypto Diversified aims to bring a decentralized autonomous diversification platform to the world through the use of smart contracts on the Ethereum network using the Bancor protocol to make relays. The smart tokens for each diversified token contract will serve as the mediator between the user and the tokens held in the smart contract.

### BANCOR PROTOCOL

The Bancor Protocol enables automatic price determination and an autonomous liquidity mechanism for tokens on smart contract blockchains. These Smart Tokens have one or more connectors to a network that hold balances of other tokens, allowing users to instantly purchase or liquidate a Smart Token for any of its connected tokens directly through the Smart Token's contract, at a price that is continuously recalculated to balance buy and sell volumes.

( QUOTE FROM BANCOR WHITE PAPER ) [www.bancor.network](http://www.bancor.network)

### CDMED

A user would send Ethereum to the CDMED contract address. The contract would then send the appropriate amount of CDMED back based off of the value of the diversified tokens held divided

by the token circulating supply. (The circulating supply will be all tokens held not including the CDMED contract address). The contract would send .05% of the eth as a fee to a fee address. The contract would then sends 99.5% eth evenly between eight Bancor relays to diversify the Ethereum ( EOS, ELF, BAX, POA, DRGN, SRN, WAX, POWR ) If a user wants to redeem their CDMED for the percentage of diversified tokens its value is tied to, they can send back the CDMED to the contract address and the diversified tokens would be sent back minus a .05% fee based off of the percentage sent compared to the circulating supply.

## FLOW CHART

## FUTURE DEVELOPMENT

Future contracts would have various levels of diversity. The CDMED contract and other future developed contracts can be added to new contract profiles once CDMED and future developed contracts are added to the Bancor network to further diversify the new contracts. Future

contracts in development also include diversifying based off of market conditions like market cap, volume and social media momentum.

## CONTRACT AUDITING

Tokens held in contracts can be viewed on the contract addresses or on our website.
